

# EXTRA CRAFTY

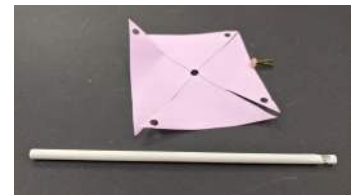

## Pinwheel

### Materials

**Paper**  
**Brad**  
**Ruler**

**Hole Punch**  
**Drinking Straw**  
**Scissors**

1. Use the ruler to measure a 4 inch square and cut it out with scissors
2. Fold the square from one corner to the opposite corner to create a large triangle. Open so that the paper is a square again.
3. Repeat with the remaining corners and unfold once more so that you have a square that has four sections .
4. Use scissors to cut along the fold line halfway to the center from each corner.
5. Use a hole punch to punch a hole in the center, in each corner on the left side of your cut, and in the straw.
6. Fold the corners with the holes into the center hole.
7. Put the brad through the center of your pinwheel (all five holes) and through the hole in the straw.
8. Close the brad, but not too tightly. You want it to be loose enough to turn. Your pinwheel is ready to spin!

***How fast can you make you pinwheel spin? Hold you pinwheel and walk slowly, then walk fast. Finally run. Your pinwheel should spin fast.***
