

Every Weather Envelope

Neither rain, nor sleet, nor dead of night... the mail travels in all weather. Can you design an envelope that keeps the material inside safe in the rain, wind, sun, and snow?

You may use whatever materials you like, but it has to hold a note or letter.

Test it by submerging it in water, setting it next to a fan, sticking it in the freezer, and leaving it in the sun and heat for an hour.

Does your envelope survive?

Is the note inside in the same condition it was before testing?

Do it again! What would you change?
